TITLE : DISPLAY BACK LIGHT CONTROLLER

ABSTRACT : PURPOSE: To automatically enable controlling the lighting and turning off of a back light and also to appropriately maintain the lighting state of the back light even though the exposure state of an external light is changed complicatedly by a surrounding environment by detecting the external light.

CONSTITUTION: A threshold value setting part 4 stores a first light quantity level set for lighting a back light 5 and a second light quantity level set for turning off the light. A back light control part 3 compares the external light quantity detected by a photosensor 1 with respective light quantity levels being in the threshold value setting part 4 and controls the lighting and turning off of the back light 5 according to the compared result.
